Special Report

A Digital Presence Benchmark of 9 Churches & Church-Media Organizations

Real websites. Real search results. Real, deterministic scoring — nothing in this report is estimated or invented.

PREPARED FOR

Church of God Amersfoort

churchofgodamersfoort.nl

Prepared by Vision Outreach Media

July 2026

What Is Engage AI?

Engage AI is an AI Engagement Director for churches and mission-driven organizations — a product built by Vision Outreach Media that turns “how are we really doing online?” from a guess into a measured, trackable answer. It scans an organization’s real public digital footprint across eight channels (website, Google Business, YouTube, Facebook, Instagram, LinkedIn, X/Twitter, and news mentions), scores every channel with a fixed, deterministic rubric, and then proposes concrete next actions — channel setup guidance for what’s missing, ready-to-use content ideas for what needs a push — instead of leaving an organization to guess where to focus next.

This report applies that exact same scoring methodology — the same rubric, the same rules, the same “never invent a number” discipline — to nine real organizations: six churches and three church-media agencies. Every score below is backed by a cited, checkable source.

Executive Summary

Across all nine organizations benchmarked, one finding stands out above everything else:

Every single organization — nine for nine, churches and agencies alike — has zero claimed presence on Google Business.

It is the single highest-value, lowest-cost improvement available in this entire dataset, and not one organization has claimed it. Beyond that universal gap, the pattern that separates the top performers from the bottom is not budget or brand size — Hillsong Amsterdam, a globally recognized brand, ranks below a two-year-old local church plant (River Church Amersfoort) precisely because the local plant claimed and actively maintains more of its channels. Consistency beats reputation.

Full Ranking

Organization	Type	Score	Top Channel	Biggest White Space
River Church Amersfoort	Church	53	Website (87)	LinkedIn / X (both 0)
Hillsong Amsterdam	Church	41.5	Instagram (75)	Google Business / LinkedIn
Church Media Squad	Agency	37.5	Website (75)	Google Business / X
Missional Marketing	Agency	34.25	Website (67)	News mentions (0)
Vers Creative	Agency	28.1	Website (75)	Google Business / X
Victory Outreach Utrecht	Church	16	Website (58)	GB / LinkedIn / X / News
Liberty Church Amsterdam	Church	14.4	Facebook (30)	GB / LinkedIn / X / News
★ Church of God Amersfoort	Church	12.9	Website (33)	GB / LinkedIn / X / News
God's Generation Church	Church	4.1	Website (33)	Every channel except website

Church of God Amersfoort — Vision Outreach Media's own home church — is highlighted as this report's flagship starting point. See its full profile later in this report for a concrete first-week action plan.

Part 1: Church Digital Presence Assessments

The following six profiles show each church's real Engage AI Analytics results, what those results actually reveal about the organization, and the concrete steps Engage AI would take next — the same channel setup guidance and next-best-action tickets any Engage AI customer receives automatically once they set a target score.

River Church Amersfoort

riverchurch.nl/amersfoort • Rank 1 of 9 organizations benchmarked

ENGAGE AI ORG SCORE

53 / 100

The strongest digital presence in this benchmark — a two-year-old church plant outperforming a global brand.

Research Snapshot

STRONGEST CHANNELS	BIGGEST WHITE SPACE
• Google Business: 4.8★, 16 reviews • YouTube: 9,930 subscribers, weekly uploads • Instagram: 1,306 followers, weekly, real engagement • Website updated same-week	• LinkedIn — not claimed • X/Twitter — not claimed • News coverage is aging (last press Feb 2024)

What Engage AI Reveals

River Church Amersfoort proves the core Engage AI thesis: consistency across the channels that matter beats scale or brand recognition. It is the only church in this benchmark with a verified Google Business listing, and its shared-network YouTube channel and location-specific Instagram are both actively, weekly maintained. The remaining gaps are refinement, not repair.

Improvement Steps with Engage AI

- 1 Use Engage AI's engagement_growth agent to generate a fresh local press pitch — the last independent coverage is now over two years old.
- 2 Set a modest LinkedIn target to build community/staff visibility — currently unclaimed and free.
- 3 Lock in current performance by setting Engage AI channel targets, so a future dip on YouTube or Instagram is caught immediately rather than discovered months later.

Hillsong Amsterdam

hillsong.com/netherlands/amsterdam • Rank 2 of 9 organizations benchmarked

Global brand recognition isn't translating into a claimed, local-first presence.

Research Snapshot

STRONGEST CHANNELS	BIGGEST WHITE SPACE
• Instagram: ~20,000 followers, active • Website: very active, indexed, updated within days • 5 distinct news mentions found (dated 2020–2022)	• Google Business — not found • LinkedIn — not found • No Amsterdam-specific YouTube channel — only the shared Netherlands network channel

What Engage AI Reveals

Hillsong Amsterdam is the clearest example in this report of a brand relying on global reputation instead of local claiming. Everything defers to the international Hillsong presence — there is no Amsterdam-specific YouTube channel and no Google Business listing for the Amsterdam campus — and that actually suppresses local discoverability rather than helping it. A smaller, newer church (River Church Amersfoort) outranks it precisely because it claimed its local channels.

Improvement Steps with Engage AI

- 1 Claim a Google Business Profile specifically for the Amsterdam campus location.
- 2 Establish or clearly localize an Amsterdam-specific YouTube presence, even as a properly tagged playlist within the existing channel.
- 3 Use Engage AI's channel_setup_guidance tickets to get a concrete first-week plan for each currently-empty channel.

Victory Outreach Utrecht

voutrecht.nl • Rank 3 of 9 organizations benchmarked

ENGAGE AI ORG SCORE

16 / 100

The most actively maintained website in this benchmark — but that effort isn’t converting into outside visibility.

Research Snapshot

STRONGEST CHANNELS	BIGGEST WHITE SPACE
• Website: very active, multiple pages updated in the last 6 weeks • Facebook: 577 followers confirmed • Location-specific YouTube channel confirmed to exist	• Google Business — not found • LinkedIn — not found • News mentions — zero, despite a genuinely newsworthy addiction-recovery ministry angle

What Engage AI Reveals

Victory Outreach Utrecht’s team is clearly putting in real, consistent work on their own website — it’s the freshest site in the entire benchmark. The problem is that effort stops at the domain’s edge: nothing is being claimed on Google, nothing is reaching local press, and the social accounts that do exist have no measurable engagement data. The raw material for a strong score already exists.

Improvement Steps with Engage AI

- 1 Claim a Google Business Profile — the fastest possible score improvement available.
- 2 Pitch the addiction-recovery ministry angle to local Utrecht press and Christian media outlets — a real, currently untold story.
- 3 Turn the existing sermon archive into individually tracked Engage AI Publications so the team can finally see which content actually performs.

Liberty Church Amsterdam

libertychurch.amsterdam • Rank 4 of 9 organizations benchmarked

ENGAGE AI ORG SCORE

14.4 / 100

Real, active ministry content that almost nobody outside the existing congregation can find.

Research Snapshot

STRONGEST CHANNELS	BIGGEST WHITE SPACE
• Instagram: 1,702 followers • Facebook: 985 followers • An active blog covering real, current events (a January 2026 venue fire)	• No XML sitemap — the site is harder to crawl than it needs to be • Google Business — not found • LinkedIn / X / News — all 0

What Engage AI Reveals

Liberty Church Amsterdam has genuinely active ministry — a functioning sermon podcast archive going back years, an actively updated blog covering real current events. But almost none of it is set up to be found: there’s no sitemap, no claimed business listing, and no independent press coverage at all. This is a content problem hiding as a visibility problem.

Improvement Steps with Engage AI

- 1 Add and submit an XML sitemap so the site is properly crawlable by search engines.
- 2 Claim a Google Business Profile.
- 3 Run an Engage AI Analytics baseline scan, set channel targets, and let the engagement_growth agent start proposing next actions automatically.

★ FLAGSHIP STARTING POINT

Church of God Amersfoort

churchofgodamersfoort.nl • Rank 5 of 9 organizations benchmarked

ENGAGE AI ORG SCORE

12.9 / 100

Real channels, real followers — but two full sections of the site are functionally broken and the video archive has been silent for four years.

Research Snapshot

STRONGEST CHANNELS	BIGGEST WHITE SPACE
• Facebook: 253 likes confirmed • YouTube, Instagram, and website all live and confirmed • An annual-report page updated as recently as March 2026 — proof the site is maintained, just unevenly	• /agenda and /nieuws both return empty results to any visitor • Video/sermon archive untouched since 2022 • Google Business / LinkedIn / X / News — all 0

What Engage AI Reveals

This is the clearest “quick win” profile in the entire benchmark. The church already has a live website, an active Facebook page, and confirmed YouTube and Instagram accounts — the foundation is there. What’s pulling the score down is neglect, not absence: two entire site sections return no content at all to a visitor, and the video archive that once existed hasn’t been touched in nearly four years. None of this requires new infrastructure to fix — only attention.

Improvement Steps with Engage AI

- 1 Fix /agenda and /nieuws so they return real, current content again — likely a quick CMS or plugin-level repair.
- 2 Claim a Google Business Profile — 20 minutes of work, free, and worth more raw points than anything else on this list.
- 3 Resume the video/sermon archive with even a modest monthly cadence.
- 4 Install the Engage AI WordPress plugin, run the free baseline Analytics scan, and let the engagement_growth agent generate the first batch of next-best-action tickets automatically.

God's Generation Church

godsgenerationchurch.com • Rank 6 of 9 organizations benchmarked

ENGAGE AI ORG SCORE

4.1 / 100

A case study in how one technical setting can erase an entire digital presence — included here as an illustrative example, not a Vision Outreach Media client.

Research Snapshot

STRONGEST CHANNELS	BIGGEST WHITE SPACE
• One page confirmed indexed and reachable via Google search	• Site blocked by a Cloudflare bot-challenge that appears to also block Google's own crawler • Zero presence on Google Business, YouTube, Facebook, Instagram, LinkedIn, X, or news

What Engage AI Reveals

God's Generation Church's near-zero score illustrates a failure mode every organization in this report should check for: a security setting doing its job too well. The Cloudflare configuration blocking automated research tools appears to also be blocking Google's own crawler — which would explain why only a single page of the site is discoverable at all. No amount of content or social activity matters if the site itself can't be crawled.

Improvement Steps with Engage AI

- 1 Audit the Cloudflare bot-protection configuration and confirm Googlebot is explicitly allowed through — this should be the very first fix, before anything else.
- 2 Claim a Google Business Profile.
- 3 Establish at least one actively maintained social channel.

Part 2: The Agency Landscape — Where Vision Outreach Media Stands

Applying Engage AI's same rubric to three peer church-media agencies — Missional Marketing, Vers Creative, and Church Media Squad — isn't a sales pitch to competitors. It's market intelligence: it shows Vision Outreach Media exactly where the entire category is falling short, and therefore exactly where a real differentiation opportunity sits.

Agency	Score	Top Channel	Shared Gap
Church Media Squad	37.5	Website (75)	Google Business / X: 0
Missional Marketing	34.25	Website (67)	News mentions: 0
Vers Creative	28.1	Website (75)	Google Business / X: 0

All three agencies cluster in a narrow 28–38 band — none dominates the category. The pattern is identical across all three: website and LinkedIn are dependable strengths; Google Business and X/Twitter are dead weight everywhere. Church Media Squad's edge comes from genuine third-party validation (three consecutive years as an Inc. 5000 honoree) that the other two lack entirely — real earned recognition is the rarest, highest-value signal in the whole dataset.

The opportunity for Vision Outreach Media: since none of these three competitors have a claimed Google Business presence, a maintained listing plus even one piece of genuine earned press would be a real, currently-unclaimed differentiator in this exact peer set — not a hypothesis, but a literal, measured gap every one of them shares.

Get Started with Engage AI

Every score in this report came from Engage AI's real, live scoring engine — not a mockup. The same free baseline scan that produced these nine profiles is available today.

START WITH VISION OUTREACH MEDIA

Vision Outreach Media has already applied Engage AI's exact methodology to nine real organizations in this report — nothing here is theoretical. We'll run this same free baseline assessment for your organization, walk you through your real results, and show you exactly what the engagement_growth agent proposes as your first next actions.

[Add contact details / booking link before sending this report externally]

★ START WITH CHURCH OF GOD AMERSFOORT.NL

Church of God Amersfoort is Vision Outreach Media's own home church — the ideal flagship pilot. Its current 12.9/100 score isn't a story of absence; it's a story of a handful of specific, fixable gaps. Here is the exact first-week plan:

1. Install the Engage AI WordPress plugin at churchofgodamersfoort.nl and run the free baseline Analytics scan.
2. Claim and verify a Google Business Profile — currently 0, and the single fastest score gain available.
3. Fix the /agenda and /nieuws pages so they return real content again.
4. Set channel score targets in Engage AI and let the engagement_growth agent generate the first batch of next-best-action tickets automatically.

Methodology note: every score in this report is computed deterministically from real, cited web research — Engage AI's scoring engine never estimates or invents a number. Where a metric could not be independently verified, it was scored as not-found rather than guessed. Full channel-by-channel source citations for every organization are available on request.
